Cyber Security Engineer

Description

Harley's Ltd is looking for a Cyber Security Engineer, with a minimum of three (3) years of experience in a similar role in a busy environment, to join the company in the ICT Department reporting to the ICT Manager and to be responsible for the maintenance, design and implementation of cyber security solutions to protect the company's hardware, software and networks.

The Cyber Security Engineer will design and implement network security solutions not excluding network security testing and implementation of new products or improvements to existing and current products. The incumbent will be involved in working with other teams in the organization as a technical resource in all technical matters, such as educating and replying to clients on issues ranging from features, functionality to integration, specifications, and installation.

Why Join Us

• **Impactful Work:** Join a vibrant work environment which promotes innovation, collaboration, and professional growth.
• **Transparent Leadership:** Experience a leadership team that is accessible, transparent, and values employee feedback.
• **Growth Opportunities:** Elevate your career with unparalleled opportunities for professional growth, directly contributing to the evolution of the company.

Key Responsibilities

- Project, configure, implement, and maintain all security platforms and any other related software, such as anti-virus, routers, email gateway, switches, firewalls, cryptography systems, SIEM and MDM.
- **Operational Management:** Perform server and security audits, system backup procedures, and other recovery processes in accordance with the company's disaster recovery and business continuity strategies.
- Monitor and test system performance by preparing and delivering system performance statistics and reports.
- Participate in the acquisition of software and equipment.
- **End User Support:** Provide excellent customer service and proven ability to professionally communicate via email, text and phone calls while delivering effective and efficient end user support.
- **Planning and Strategy:** Participate in and support capacity planning and the development of long-term strategic goals for systems and software in conjunction with the IT strategy.
- **Log Analysis:** Coordinate and oversee log analysis for company managed services offerings to ensure customer policy and security requirements are met.

Qualifications

- Must have a minimum of a bachelor's degree in computer science, Information Technology or any related field.
- A minimum of three (3) years' experience in similar role.
